PRODUCT DATA SHEET

23.5ct Triple Thick Gold Leaf

Professional genuine gold leaf for demanding exterior, architectural and high-wear gilding applications

Wrights of Lymm 23.5ct Triple Thick Gold Leaf is a heavy-gauge genuine gold leaf developed for projects where increased durability, handling strength and coverage are important. Its high gold content gives the warm, rich colour associated with traditional 23.5 carat gilding, while the heavier leaf is especially suited to robust architectural and exterior work when used with a suitable gilding system.

Product Specification

Product	23.5ct Triple Thick Genuine Gold Leaf
Gold purity	23.5 carat
Form	Heavy / triple-thick leaf
Leaf size	80 x 80 mm
Pack format	25 leaves per book
Appearance	Rich traditional yellow-gold tone
Recommended use	Interior and exterior decorative gilding

Typical Applications

Suitable for architectural details, exterior lettering, monuments, carved work, frames, restoration, ecclesiastical decoration, signage and other prestige gilding projects. The heavier leaf can be advantageous on exposed or high-value work where a more substantial metal layer is preferred.

Application Guidance

Apply only to a clean, smooth, dry and correctly prepared surface. Use a suitable oil-based or water-based gilding size selected for the substrate and working conditions. Lay the leaf when the size has reached the correct tack, then lightly press or brush down with an appropriate gilding mop or soft brush. Avoid overworking the leaf. For exterior work, ensure all preparation coats, size and any protective treatment are compatible with the substrate and intended exposure.

Coverage

Coverage depends on surface texture, overlap, waste and the complexity of the work. Allow additional material for profiles, carving, lettering and external work. For accurate project quantities, carry out a representative test area before ordering the full requirement.

Storage & Handling

Store books flat in a clean, dry environment away from damp, excessive heat, direct sunlight and air movement. Handle with clean, dry hands or suitable gilding tools. Gold leaf is extremely thin and delicate even in heavy grades; open books carefully and protect unused leaves from draughts and contamination.

Important Notes

This data sheet is intended as general product guidance. Results depend on substrate condition, preparation, application method and environmental exposure. Always test the complete gilding system on a small representative area before full application. Product dimensions and presentation may be subject to normal manufacturing tolerances.
